

RESPONSIBLE CARE POLICY

May 1, 2019

The Aglobis Group stands for reliable and long term sourcing, marketing and distribution of sulfur and sulfuric acid.

We provide our services out of our Swiss and German entities on a global basis, supported by our own logistics assets such as our Aglobis Rotterdam tank terminal and our own truck and rail car fleet operated by Ruhrtrans GmbH.

Aglobis is fully committed to the ethics and principles of Responsible Care (RC) as key of its business value and philosophy towards social, environmental and economic sustainability. Aglobis strives to manage effectively and efficiently all risks in the areas of Occupational Safety & Health, Process Safety, Product Safety & Stewardship, Safe Transportation, Environmental Protection and Security on its premises, throughout its operations, services and supply chain, focusing on continuous improvement of performance.

The RC key focus points for the Aglobis Group :

- Educate, promote and reach-out principles, culture and awareness of Responsible Care throughout the organization and its stakeholders.
- Stimulate and encourage all employees and other stakeholders to cooperate and participate in programs and plans that support and guide integration of Responsible Care into the business.
- Implement and maintain structures and systems to manage risks in the areas of Safety, Health, Environment and Security adequately.
- Live Risk Management and Loss Control actively throughout business and operations/services in order to prevent and/or minimize (potential) negative impact on people, planet, property and society.
- Comply with relevant policies, laws, regulations and other requirements and strive to exceed these where deemed appropriate.
- Demonstrate efforts and results of sustainable excellence to employees, customers, suppliers, other partners and the community.
